

Database Management System
Conference Management System

BSCS-4A

Assignment no.2

Saad Ahmad – 01-134222-130

Sohaib Ahmed – 01-134222-142

Muhammad Saim Ranazai – 01-134222-083

Section 2.0 Update the assignment 1 report based on the comments given

Section 2.0 should have the following table:

- Create a compliance table in the beginning of this section.

	Comments	Action	Page No.
1	To update project objectives	Project objectives updated in Sec 1.2	Page 3-Sec 1.2: Objectives
2	Interview is missing	Interview added in Sec 1.3: Conducted interview with Dr. Muhammad Asfand-e-yar	Page 4-Sec 1.3: Project Planning
3	To redraw system boundary diagram	Revised and recreated the system boundary diagram in Section 1.4.	Page 6- Sec 1.4: System Boundary Diagram

Section 2.1 Identify the data elements in your system

2.1 Identify the data elements in your system Based on the requirements gathered in assignment 1 from interviews and documents, list all entities that you need store data about. Read through this article for guidelines how to extract useful information from interviews or documents.

1. Organizer
2. Speaker
3. Attendee
4. Reviewer
5. Sponsor
6. Event
7. Papers
8. Schedule
9. Feedback

Section 2.2 System Specification

2.2 System Specification: (refer to section 11.4.4) Create major user views of your system as done in Figure 11.11 based on users identified in assignment 1. Your data column for the figure and table should be derived from section 2.1. You should have similar matrix tables in your report as Figure 11.11 and Table 11.7. Read the chapter carefully to understand how these will be created.

Data	Access Type	Organizer	Speaker	Reviewer	Attendees	Sponsors

Section 2.3 Wireframes:

2.3 Detailed User-views using Wireframes Create detailed wireframes for your project. Wireframes should be included for all interfaces of each identified use. Each wireframe should be mapped to requirements identified in table/figure in section 2.2. For Each view, fill in the following table.

Dashboard	Upcoming Conferences				
Conference Management	Title	Start Date	End Date	Attendees	Registration Status
Speaker Management					
Registration Setup					

Wireframe ID	V1				
User	Organizer				
User View Req	Table 2.1 S1				
Component	Description	Input	Output	Action	Require DB Access
Title	Users can see the title	YES	Yes	NO (The title is static once set, there's no action associated)	YES (To store and retrieve conference titles)
Start Date	User can see the start date	YES	Yes	NO (The start date is static once set,	YES (To store and retrieve

				there's no action associated)	conference start dates)
End Date	User can see the end date	YES	Yes	NO (The end date is static once set, there's no action associated)	YES (To store and retrieve conference end dates)
Attendees	User can see the number of attendees	NO	Yes	NO (Attendees are managed automatically by the system)	YES (To store and retrieve the list of attendees)
Registration Status	User can see if the registration is open or not	NO	Yes	NO (Registration status is managed automatically by the system)	YES (To store and retrieve user registration statuses)

Create new Conference

Update Conference

Title	Input field or label displaying the title of the paper	No	Yes		Yes
Subject Areas (Primary)	Input field or label displaying the primary subject areas of the paper	No	Yes		Yes

Subject Areas (Secondary)	Input field or label displaying the secondary subject areas of the paper	No	Yes		Yes
Review & Discussion	Button or link to access the review and discussion section for the paper, allowing reviewers to provide feedback and engage in discussion about the paper	Yes	Yes		Yes

Section 2.4 Important Features:

List all the important features for your project including:

- initial database size;
- database rate of growth;
- the types and average number of record searches;
- networking and shared access requirements;
- performance;
- security; (Read the chapter carefully to understand how these will be created. Use a similar approach for listing them for your project)

- **Initial Database Size**

- i. Approximately 100 conferences managed, with an average of 5 and a maximum of 10 conferences per event.
- ii. Around 1000 attendees across all conferences, averaging 50 and peaking at 100 attendees per conference.
- iii. Approximately 100 organizers across all events, with an average of 5 and a maximum of 10 organizers per event.
- iv. Roughly 2000 reviews recorded across all conferences, averaging 200 and peaking at 500 reviews per conference.
- v. Around 5000 views of conference results across all events, with an average of 500 and a maximum of 1000 views per event.

- **Database Rate of Growth**

- i. Expect approximately 20 new conferences and 100 new attendees added monthly.
- ii. About 5 conference records and 5 attendee records will be deleted monthly based on specific criteria.
- iii. Approximately 3 new organizers join and leave monthly, with records of departed organizers deleted after a year.
- iv. Approximately 500 new reviews are recorded daily, with details deleted after a year.

- **Types and Average Number of Record Searches**

- i. Approximately 20 searches daily.
- ii. Varies between 100 (Mon-Thurs) and 200 (Fri-Sat) daily, with peak times specified.
- iii. Around 10 searches daily.
- iv. Varies between 50 (Mon-Thurs) and 100 (Fri-Sat) daily, with peak times specified.
- v. Varies between 200 (Mon-Thurs) and 400 (Fri-Sat) daily, with peak times specified.

- **Networking and Shared Access Requirements**

- i. All conferences securely networked to a centralized database.
- ii. System supports 5-10 concurrent accesses per conference for organizers, speakers, attendees, reviewers, and sponsors.
- iii. System designed to handle peak times and potential spikes in concurrent accesses.
- iv. Emphasis on securely storing sensitive data like attendee details and scores.

- **Performance**

- i. Expect less than 1-second response during operating hours and less than 5 seconds during peak periods.
- ii. Less than 5 seconds during regular hours and less than 10 seconds during peak periods.
- iii. Less than 1 second during normal hours and less than 5 seconds during peak periods.

- **Security**

- i. Database secured with password protection.
- ii. Users assigned appropriate access privileges based on roles (Admin, Organizer, Speaker, Attendee, Reviewer, Sponsor).
- iii. Users see only relevant data based on their role, ensuring data security and privacy. For example: A delegate should only see the conference schedule sent to them via mail to ensure efficiency.
